I'll take it from here. Angela sent me hers which is no comments.

I do have one minor comments related to a word "breakdown", which I think they need to change since the other VOCs detected in the SGV samples are not PCE/TCE breakdown products.

Arlene - do you have comments?

Denise and Arlene - I do not have any further comments on ATSDR's VI analysis. They are stating that there are no levels of concern at this point and we should continue sampling regularly, which I agree with. I'm not sure if you wanted to respond on behalf of EPA in general, so I have not responded directly to ATSDR.

Thanks,
Becky Ofrane

Subject: ATSDR Health Consultation (revised) for Cabo Rojo - pls comment by COB 4/26

Attached please find our revised HC for Cabo Rojo. It incorporates both Phase 1 & 2 results. I believe we've addressed the major comments discussed at our meeting last week, 4/16/12. For easier review, Jill also sent along a version that has the major additions/changes highlighted (also attached).

If possible can you get comments back to us by COB this Thursday? Sorry for short turn around time, but we're hoping to start pushing this through our clearance process by end of this week so we can more freely discuss our conclusions & recommendations at our upcoming meetings w/you all, HHS, and local PR agencies.

Thanks. Let me know if there are issues w/getting comments back to us and we'll try and work something out.

Elena
